Consolidated Copper Corp (CCC)

Copper producer, clear strategy with compelling upside

September 2026

IMPORTANT NOTICE

This corporate presentation ("Corporate Presentation") contains selected information relating to the operations of Consolidated Copper Corp ("CCC"), together with its affiliates and subsidiaries (collectively, the "Company").

This Corporate Presentation is provided on a non-reliance basis and is not intended to form the basis of any investment decision or decision to enter into a transaction involving the Company. Each recipient should conduct its own independent investigation and analysis of the Company.

This Corporate Presentation does not constitute or form part of an offer to sell, or a solicitation of an offer to purchase any securities or other interests in the Company or an invitation for the sale or purchase of any security or financial instrument relating to the Company. Neither this Corporate Presentation nor anything contained in it shall form the basis of, or be relied upon in connection with, any contract or commitment whatsoever.

The information contained in this Corporate Presentation has been provided by or on behalf of the Company. Neither the Company nor any of its affiliates or representatives makes any representation or warranty, express or implied, or accepts any responsibility or liability or any duty of care as to the accuracy, completeness, reliability and reasonableness of this Corporate Presentation or any other written or oral information made available to any recipient. Any liability, obligation or undertaking arising directly or indirectly out of, or in connection with, this Corporate Presentation is expressly disclaimed to the fullest extent permitted by law.

Certain information, statements, beliefs and opinions in this Corporate Presentation are forward looking. Forward-looking statements are statements that are not historical facts. These statements include, without limitation, financial projections and estimates and their underlying assumptions, statements regarding plans, objectives and expectations with respect to future value, production, operations, costs, products and services, and statements regarding future performance. Forward-looking statements are generally identified by the words "plans," "expect," "anticipates," "believes," "intends," "estimates" and other similar expressions. All forward-looking statements involve a number of risks, uncertainties and other factors. Although the Company's management believes that the expectations reflected in such forward-looking statements are reasonable, investors are cautioned that forward-looking information and statements are subject to various risks and uncertainties, many of which are difficult to predict and generally beyond the control of the Company, that could cause actual results and developments to differ materially from those expressed in, or implied or projected by, forward-looking information and statements contained in this Corporate Presentation. Factors that could cause or contribute to differences between the actual results, performance and achievements of the Company include, but are not limited to, political, economic and business conditions, industry trends, competition, fluctuations in the price of copper and other commodity prices, changes in regulation, currency fluctuations, the Company's ability to successfully integrate future acquisitions, to recover its reserves or develop new reserves, including its ability to convert its resources into reserves and its mineral potential into resources or reserves and to timely and successfully process its mineral reserves, trespass, theft and vandalism, changes in its business strategy, as well as risks and hazards associated with the business of mineral exploration, development, mining and production. Accordingly, investors should not place reliance on forward-looking statements contained in this Corporate Presentation. Any forward-looking statements in this Corporate Presentation speak only as of the date of this Corporate Presentation. The Company does not undertake any obligation to update or revise any forward-looking statement as a result of new information, future events or other information. In light of these risks, results could differ materially from those stated, implied or inferred from the forward-looking statements contained in this Corporate Presentation.

Neither the Company nor any of its affiliates or representatives makes any representation or warranty as to the achievement or reasonableness of any projections, forecasts, management targets, estimates, prospects, anticipated returns or other forward-looking information contained in this Corporate Presentation. The recipient should make its own investigation of the Company and all information provided in the Corporate Presentation.

This Corporate Presentation and the information contained in it may not be copied, reproduced, distributed or published in any form, in whole or in part, for any purpose, at any time without the prior written consent of the Company.

The Company undertakes no obligation to provide any recipient with access to additional information, to update this Corporate Presentation or to correct any inaccuracies contained in it which become apparent at any time.

This Corporate Presentation is directed only at persons who:

a) have professional experience in matters relating to investments and fall within the definition of "investment professionals" under the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005, as amended or replaced (the "Order"); or

b) are high-net-worth persons or other persons to whom this Corporate Presentation may otherwise lawfully be communicated in accordance with the Order,

and who, in each case, are capable of being categorised as a Professional Client per se or Eligible Counterparty for the purposes of the Financial Conduct Authority's Conduct of Business Rules. All such persons are referred to as "relevant persons."

This Corporate Presentation must not be acted upon or relied upon by persons who are not "relevant persons". Any investment or investment activity to which this Corporate Presentation relates is available only to "relevant persons".

Nothing in this Corporate Presentation constitutes investment, legal, tax, accounting or other professional advice. Any statements or recommendations contained in it have not been prepared with regard to the investment objectives, financial circumstances or particular needs of any specific recipient. Each recipient should make its own independent assessment of this Corporate Presentation and each prospective purchaser interested in acquiring securities in, or evaluating a transaction with the Company should obtain its own independent financial, legal, tax, accounting and other professional advice.

The distribution of this Corporate Presentation in jurisdictions outside the United Kingdom may be restricted or prohibited by law. Persons into whose possession this Corporate Presentation comes must inform themselves about, and comply with, any applicable restrictions. Recipients represent that they are able to receive this Corporate Presentation without contravention of any legal restrictions in the jurisdiction in which they reside or conduct business. Any failure to comply with such restrictions may constitute a violation of the laws of the relevant jurisdiction.

This Corporate Presentation does not constitute an offer to sell, or a solicitation of an offer to buy, any securities in the United States. The offer and sale of any securities of the Company have not been, and will not be, registered under the United States Securities Act of 1933 (the Securities Act), and such securities may not be offered or sold in the United States except pursuant to an exemption from, or in a transaction not subject to, the registration requirements of the Securities Act and the securities laws of any state or other jurisdiction of the United States.

Corporate overview

Overview of key assets

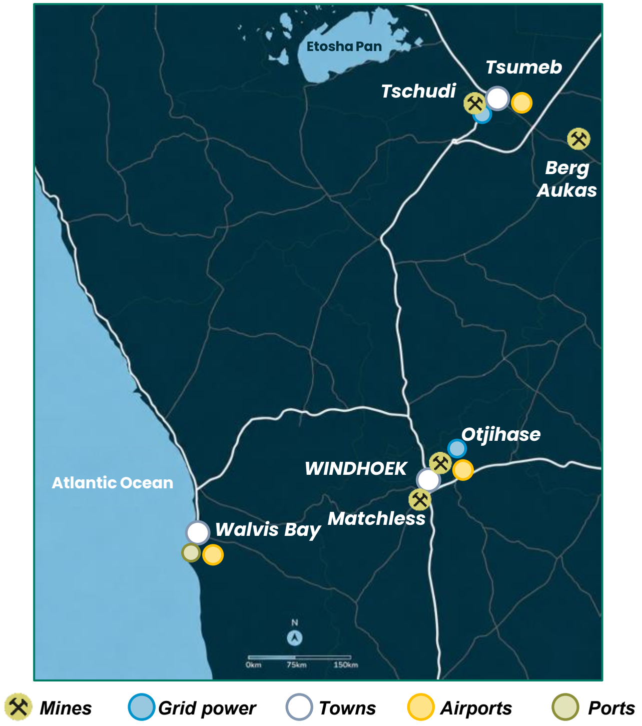
Tschudi

✓ Cathode production recommenced in 2024 with mining to restart in 2027

Central Operations (Matchless and Otjihase)

✓ Near-term restart combines well understood geology and exploration potential

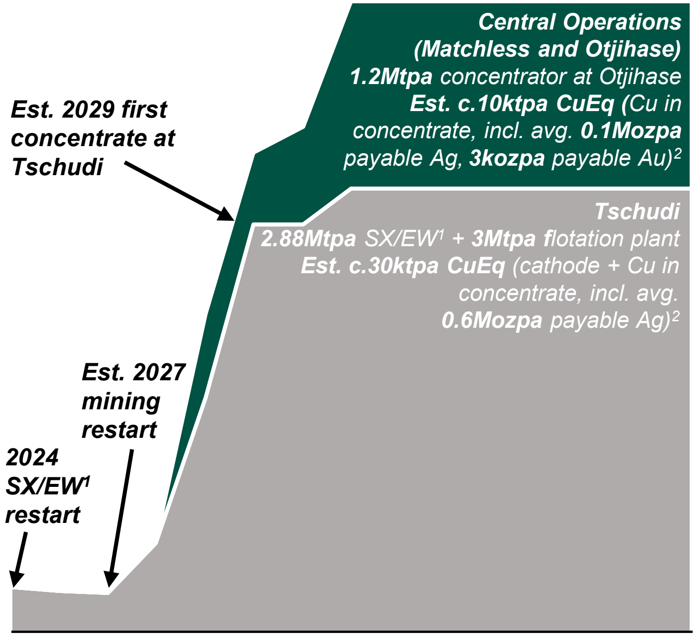
Regional overview



✓ Mines located in close proximity to sealed roads, grid power with excellent air and port access

Production pathway (payable metal)

Ktpa CuEq Cu in concentrate and cathode



✓ Pathway to c.40ktpa CuEq run-rate production[3] and EBITDA >$200m[3] by 2029

1. Solvent extraction and electrowinning
2. Ag and Au converted to ktpa CuEq at current spot prices of Ag ($68/oz), Au ($4,606/oz) and Cu ($14,450/t) as of 27-Aug-26
3. EBITDA and production based on consensus Cu / Ag / Au price forecasts; CuEq converted at current spot prices of Ag ($68/oz), Au ($4,606/oz) and Cu ($14,450/t) as of 27-Aug-26

Operational snapshot

Integrated mining, processing, infrastructure and sales platform supporting end-to-end copper production

Mining operations

Tschudi

Open pit mining operations to recommence in 2027

Central Operations

Drill campaign underway in 2026 at Matchless Western Extension

✓ Tschudi mining ramp-up by 2029, with most of the requisite permits in place

Processing

Heap leach operations and 2.88Mtpa SX/EW plant

Concentrator can be refurbished in <6 months costing <$3m

✓ First mover advantage with three in-country processing plants by 2029

Infrastructure

Power supply agreement in place (NamPower)

Matchless ore hauled to Otjihase for processing

✓ Existing surface infrastructure in good condition

Sales

Cathode[1] production restarted in 2024

Concentrate production with offtake in place

✓ Multi-product copper offering (cathode and concentrate)

1. Copper cathode conforming to LME Grade A specifications

Key achievements and outlook

Ongoing drilling success has led to multiple resource upgrades and improvements to LoM restart plans

2018
- Bonohgroup Limited (led by John Sisay) acquires Weatherly Mining Namibia from administrators[1]

2021-22
- CCC acquires all subsidiary shares held by Bonohgroup to take assets out of care and maintenance
- Tschudi resource **38.0Mt @ 0.82% Cu**
- Tschudi, Matchless and Otjihase acquisitions completed

2023
- Open Pit Feasibility Study (heap leach and flotation)
- Tschudi resource **50.0Mt @ 0.75% Cu**
- $20m funding secured for stockpile start provided by CCC founders

2024
- Dewatering study for mining restart
- Tschudi phased restart study (heap leach only)
- First SX/EW cathode production from stockpiles
- First cathode sales

2025
- Tschudi resources **57.4Mt @ 0.72% Cu**
- Trade-off study on expansion (flotation sulphides plant)

2026
- Tschudi resources[2] **109.5Mt @ 0.75% Cu**
- Tschudi heap leach DFS to be completed in Q3 2026
- Resource upgrade at Tschudi expected in Sep-26
- Tschudi sulphides study in Q4 2026

2027
- Tschudi mining recommences
- Preparation for Matchless and Otjihase to start[3]
- Construction of open pit dewatering completed at Tschudi
- Tschudi sulphides FS by end Q2 2027

Key facts
Activities
Future milestones

1. Tschudi was placed on care and maintenance in 2020 due to reserve depletion and funding constraints limiting reserve extension drilling, while Central Operations was in care and maintenance since c.2015
2. Unconstrained resources of 109.5Mt and constrained resources (within RPEEE shell) of 46.3Mt; unconstrained and constrained resources are inclusive of reserves
3. Mining operations at Hoffnung Fault West (Otjihase) and Western Extension (Matchless) to start in Q1 2028 and Q4 2027

Namibia is Africa's fastest developing mining jurisdiction

Namibian in-country features

- ✓ *Stable democracy with independent judiciary and strong rule of law*
- ✓ *Attractive sovereign rating, with Moody's at B1 Positive and Fitch Ratings at BB- Stable*
- ✓ *Transparent system of mineral and surface title with supportive mining policy*
- ✓ *Shorter lead times for mining supplies than most other African jurisdictions*
- ✓ *Access to skilled labour and South African mining services ecosystem*
- ✓ *Political and social support for mining, with ambition to further develop mineral resources*

Regional infrastructure

- ✓ Proximity to **Walvis Bay and Atlantic shipping routes** minimise operational and construction risk
- ✓ Excellent infrastructure with **paved roads and air access**

Leading and stable governance[1]

THE WORLD BANK

#5 out of 49 *Political stability*	**#4** out of 49 *Rule of law*
#5 out of 49 *Regulatory quality*	**#5** out of 49 *Government effectiveness*

✓ *Ranked #5 overall in Sub-Saharan Africa in 2024*[2]

Established mining-friendly jurisdiction

Uranium	*Gold-Copper*	*Other*
Bannerman Energy	B2Gold	Andrada Mining
Deep Yellow Limited	Koryx Copper	Anglo American / Namdeb
Orano	Midas Minerals	Appian Capital Advisory LLP
Paladin	QKR Namibia	SQM
Rio Tinto	WiaGold	Vedanta

1. World Bank Group-Worldwide Governance Indicators. Rankings based on relative position to other Sub-Saharan African countries (49 countries). Numerical values based on score between +2.5 to -2.5
2. Based on average of all indicators

Key value creation drivers under current ownership

Exploration and resource upgrades

High impact and cost-effective exploration

50km of historical drill out has proven strike and depth extensions of existing orebody, adding significant resources to the MRE

***c.60Mt** added to MRE for Tschudi (Jun-26 vs Dec-23)*

***<$0.003/lb** cost of drilling*

Tschudi open pit

Resource upgrades linked to a thicker orebody and greater mix of oxides

First major diamond drilling programme in around 40 years

*Deposit **up to 50m** thick vs 5-30m for prior interpretation*

***2.1Mt**[1] additional footwall ore now suitable for heap leach processing*

***2.2Mt** additional chalcopyrite ore previously stockpiled for flotation*

Run-of-mine pad

Mine plan

Larger open pit driving mining schedule uplift

Prior studies were limited by marginal ore tonnage and spatial mining constraints associated with smaller pits

Under a larger open pit, more efficient mining equipment enables lower unit operating costs

Defined plan for pit dewatering and ongoing water management

Dump truck in operation at site

Processing

Processing plant and recovery enhancement increasing copper tonnages produced

Processing plant restart has demonstrated higher recoveries from Tschudi bornite ores exposed to natural oxidation compared to prior actuals

***3Mtpa** flotation plant for sulphides / ore*

***+5%** recoveries compared to prior actuals*

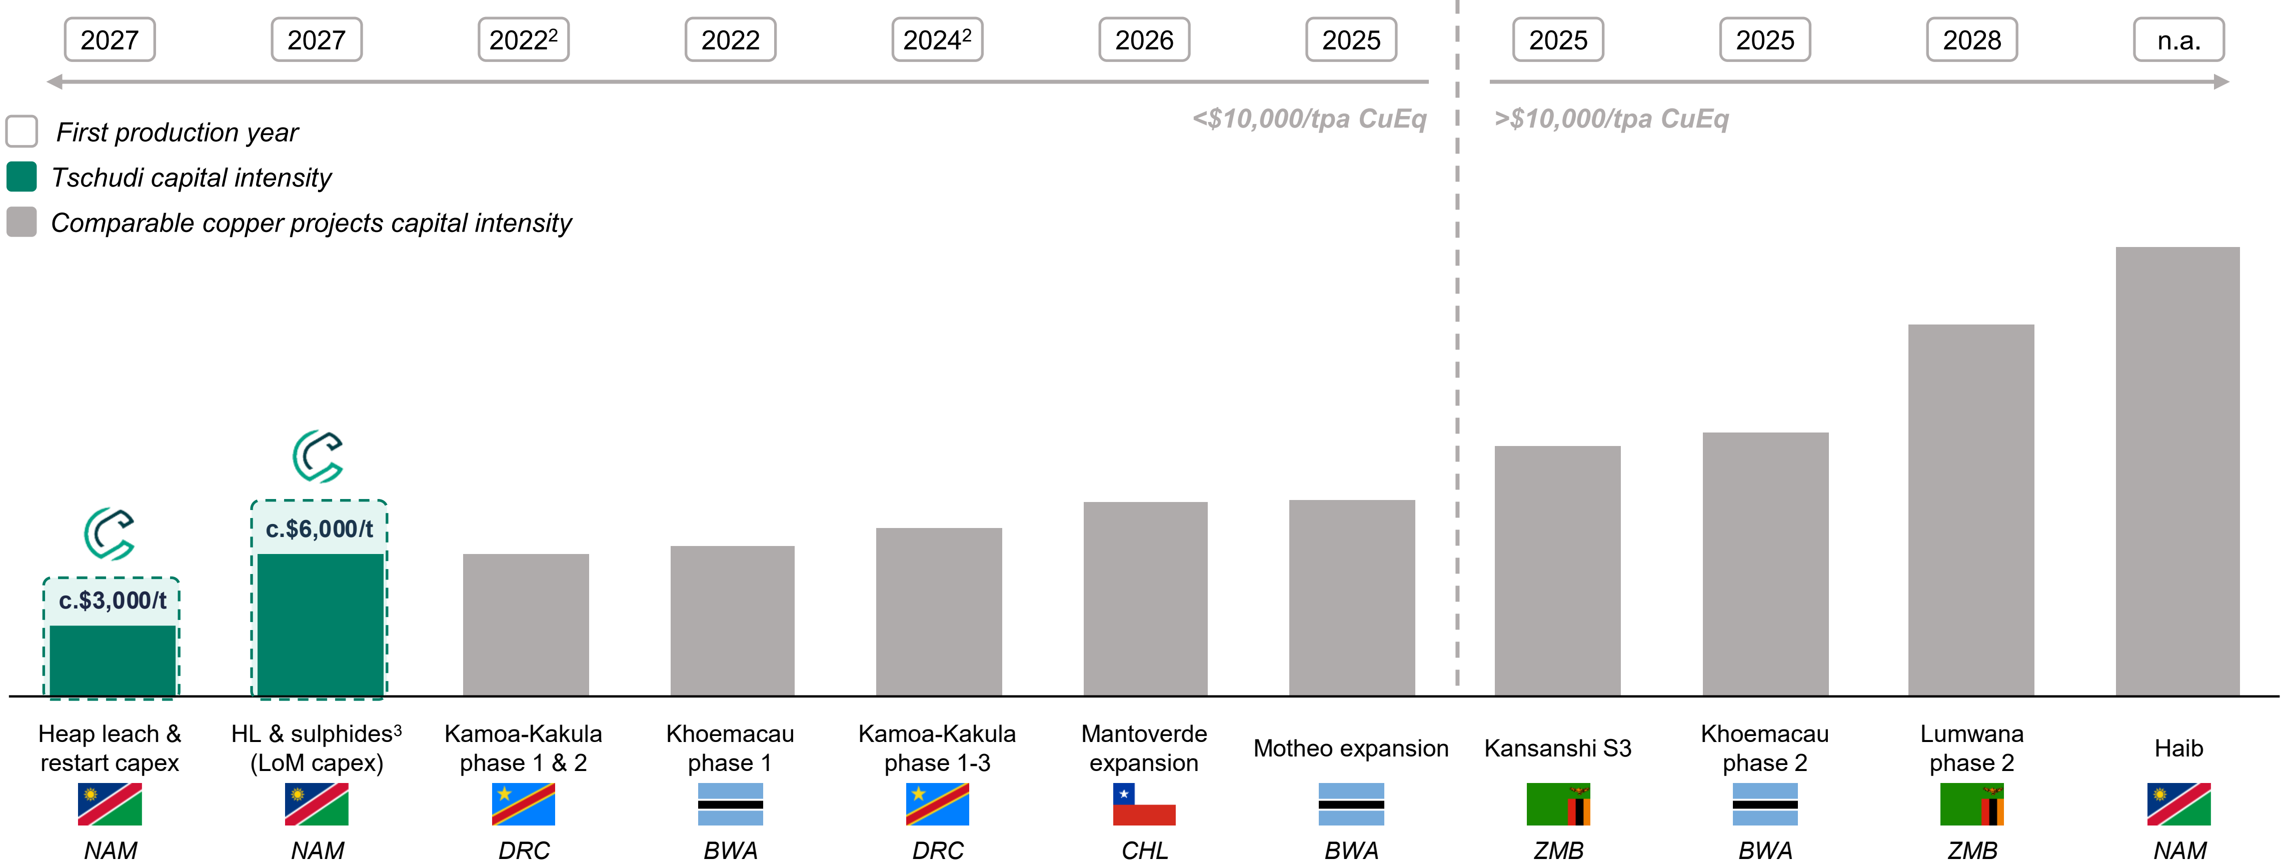
Heap leach operations

1. Previously considered waste or stranded sulphides

Low capex restart plan

Tschudi restart is low capital intensity and will deliver meaningful tonnes into the market by 2029

Tschudi and comparable copper projects capital intensity ($/tpa CuEq)[1]



Source: Company information, publicly available information for respective copper projects

1. Tschudi average Cu production per annum based on average of 7-8-year production from run-rate; Khoemacau phase 1-2, Motheo Expansion and Kansanshi S3 based on CuEq production; Haib includes heap leach and SX/EW capex in year 2 and year 3
2. Refers to completion of last phase
3. Expansion case includes production both from flotation plant and heap leach (at a reduced processing amount vs heap leach only case)

CCC investment highlights

CONSOLIDATED COPPER

Multi-asset base metals portfolio in an attractive jurisdiction

- Namibia offers an attractive mining environment benefitting from a stable democracy, strong rule of law and clear regulations
- Flagship asset: Tschudi copper mine (c.430km north of Windhoek), with 109.5Mt of copper resources @ 0.75%[1] and potential further resource growth from Q3 2026 drilling
- Other assets: Central Operations (Otjihase mining complex and concentrator, Matchless mining complex) and Berg Aukas (zinc-lead polymetallic project)

Copper production recommenced at Tschudi in 2024, with open pit mining restarting in 2027

- Tschudi operations restarted in 2024, producing 7.6kt (as of Jun-26) of copper cathode (conforming to LME Grade A specifications) via heap leach through an existing 2.88Mtpa SX/EW plant[2]
- The heap leach DFS, due in Q3 2026, will include a low-capital restart that leverages existing surface infrastructure to deliver run-rate cathode production of >14ktpa Cu, with a 10 year mine life[3]
- Development capital for the Phase 1 restart is $30-40m, making Tschudi one of the lowest capital-intensity restarts globally (c.$3,000/t)
  - Restart capital for dewatering, mining contractor pre-strip, mining mobilisation and demobilisation, a crushing plant and a leach pad
- Tschudi offtake is fully unencumbered

Low-risk Tschudi expansion[4] plan deliverable through larger open pit mining operations and a new flotation plant

- Defined pathway to grow total annual run-rate production to c.30ktpa of CuEq[5] (cathode plus Cu in concentrate, including an average of c.0.6Mozpa of CuEq[5] silver by-product)
- Expansion plan increases mining rates at the Tschudi open pit operations to 45Mtpa run-rate, with the construction of a 3Mtpa flotation plant (2027-2029) that will operate alongside SX/EW refining from mid 2029 onwards
- Total project capex for the 3Mtpa flotation plant is <$150m, implying a capital intensity of c.$6,000/t across the expansion plan

Central Operations is a high-grade, near-term brownfield restart opportunity

- The Central Operations restart benefits from well understood geology and substantial resource growth upside, together with significant existing surface infrastructure[6]
- Historical copper concentrates at Central Operations were recognised as an attractive metal-in-concentrate, with the flotation plant sequentially producing copper concentrate and pyrite concentrate with silver being primarily contained in the copper concentrate
- Restart plan uses cut and fill, and room and pillar underground mining at Matchless and Otjihase respectively, producing c.10ktpa CuEq[5] Cu in concentrate run-rate, c.0.1Mozpa Ag and c.3kozpa Au over a 10+ year mine life

1. Unconstrained resources of 109.5Mt and constrained resources (within RPEEE shell) of 46.3Mt; unconstrained and constrained resources are inclusive of reserves
2. Other existing infrastructure includes offices, workshops, a wash bay, laydown area, fuel storage facility and grid power connections
3. 8 years average excluding ramp-up years
4. Expansion case includes production both from flotation plant and heap leach (at a reduced processing amount vs heap leach only case)
5. Ag and Au converted to ktpa CuEq at current spot prices of Ag ($68/oz), Au ($4,606/oz) and Cu ($14,450/t) as of 27-Aug-26 for Tschudi and Central Operations
6. Includes the 1.2Mtpa Otjihase concentrator (can be refurbished in under 6 months at a cost of <$3m), workshop areas, backfill plant, tailings dam and accommodation camps

Large-scale base metals resource footprint

Highly prospective copper footprint in Namibia’s Damara Orogen zones

Geological overview

1

Tschudi

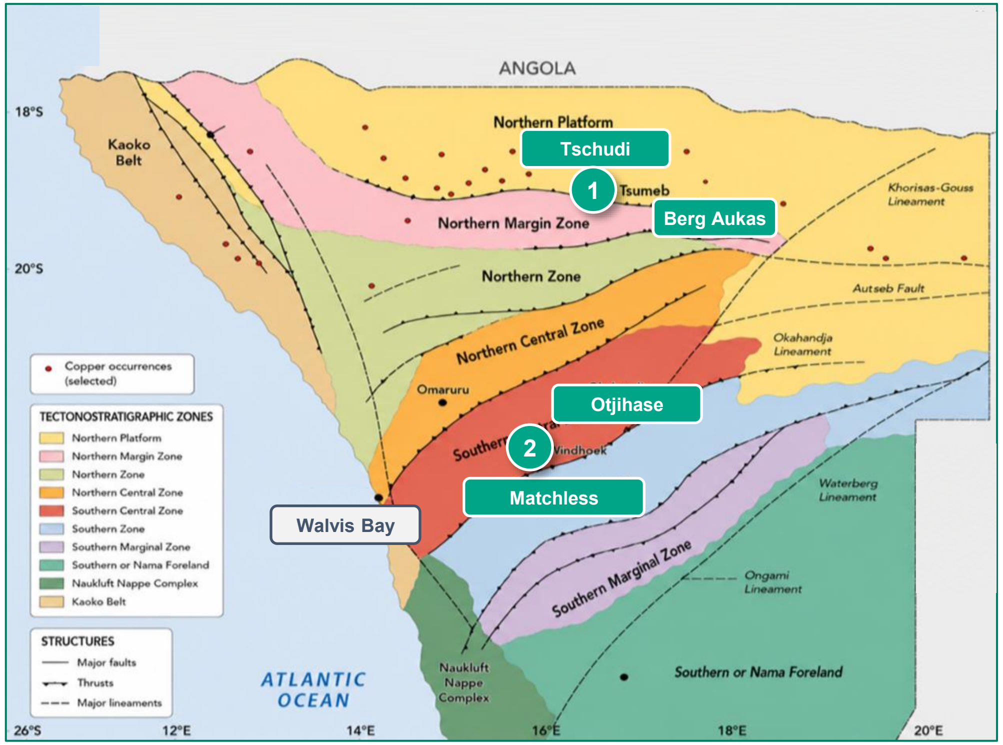
- The Damara orogenic belt in Namibia is one of the Pan-African orogenic belts that formed during the breakup of Gondwana
- The Damara orogen is in Central Namibia and it splits into a north-trending coastal branch (Kaoko belt) and a north-east-trending intracontinental branch (Damara belt)
- The Damara belt is then subdivided into tectonostratigraphic zones according to the stratigraphy and structural-metamorphic characteristics. Tschudi is hosted at the contact of the Northern Platform and Northern Marginal Zone

2

Central Operations

- The Central Operations deposits lie on the Matchless Amphibolite Belt, within the Kuiseb Formation of the Damara orogen’s Southern Zone, part of the upper Damara sequence
- The Matchless Amphibolite Belt possesses similar geology to the Central Africa Copperbelt

Map of regional geology



Tschudi geology and resources

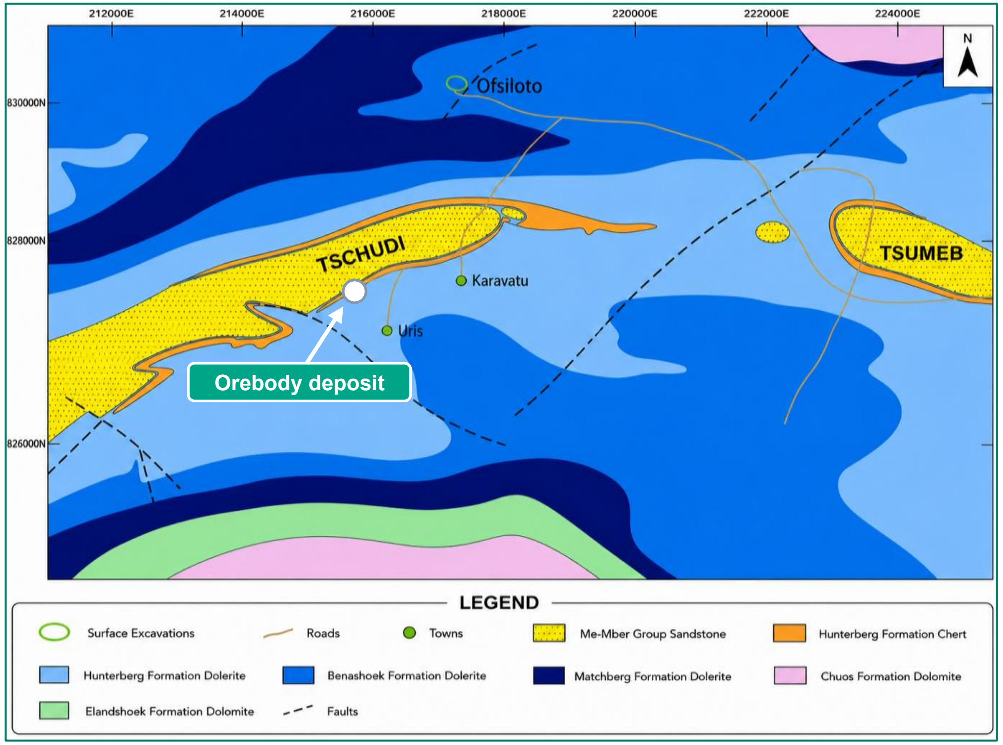
Established copper system with defined scale

Geological overview

- The Tschudi copper deposit is hosted in a northern carbonate platform sequence of the Neoproterozoic Damara Belt in Northern Namibia. The orebody is stratiform, dipping c.30° north, with a strike length of c.3.9km, and mineralisation extends below 500m
- The mineralisation is disseminated through sandstone and intermittent basal conglomerate unit of the Tschudi Formation. Hosts oxide, secondary and primary sulphides
- The Tschudi Formation lies unconformably on the dolomitic carbonate sediments of the Huttenberg Formation
- Orebody thickens in areas where there are drag folds that overlie (upper orebody) the continuous lower orebody
- Orebody is open ended to the east, west and downdip

Jun-26 Tschudi resources and reserves (0.3% Cu cut off)[1]		
Category	**Tonnage (Mt)**	**Grade (% Cu)**
Indicated	38.5	0.84
Inferred	71.0	0.69
Total resources	**109.5**	**0.75**
Total reserves	**31.5**	**0.81**

Tschudi local geology



1. Unconstrained resources of 109.5Mt and constrained resources (within RPEEE shell) of 46.3Mt; unconstrained and constrained resources are inclusive of reserves

Tschudi heap leach restart snapshot

Overview of current restart operations

Mining and processing

- Open pit mining to recommence in 2027 with a staged approach utilising 90t rigid dump trucks and 200t class excavators
- Material is drilled and blasted before hauling with blasting done in 12m benches and ore mined in 3m flitches to minimise dilution
- Waste is hauled to waste rock dumps south and north-east of the open pit
- Heap leaching technique, with ore crushed and agglomerated then stacked on leach pads. The leach pad is currently stacked with 15.3Mt of ore
- Operating since May-24 with 97% availability, refinery capacity of 17ktpa[2] copper cathodes
- Direct connection to the NamPower electricity grid supplying up to 10MVA
- Processing water obtained from boreholes providing the required up to $1Mm^3$ per annum of water supply

Key metrics

	Units	DRAFT LoM
Physicals / processing		
Total ore processed	Mt	20.8
Grade processed	% Cu	0.82
Strip ratio	x	8.7
Average copper recovered	ktpa Cu	c.14
Key operating metrics		
AISC	$/lb Cu	c.3.4
Development capex	$m	30-40
Mine life	years	10

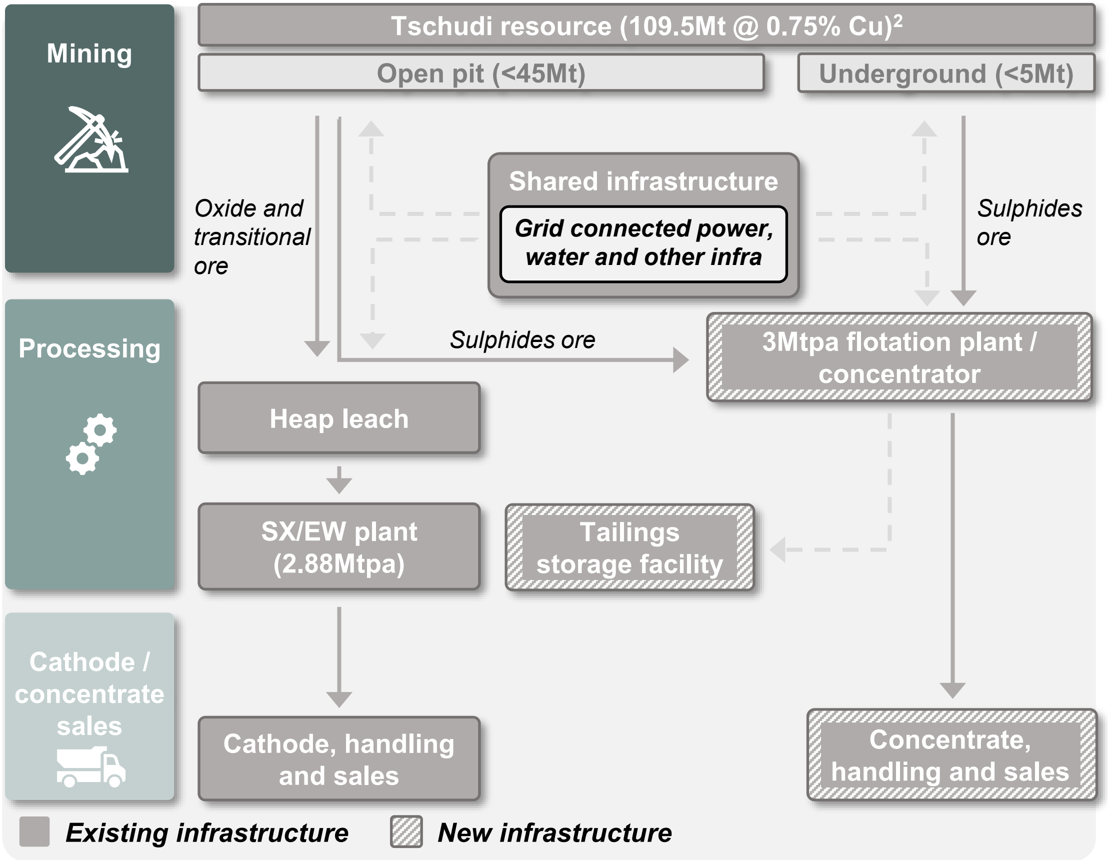
Map of current operations

1. Run-of-mine pad
2. Actual capacity based on tonnes ore rather than final product; cathode production depends on achieved recoveries / grade in the ore

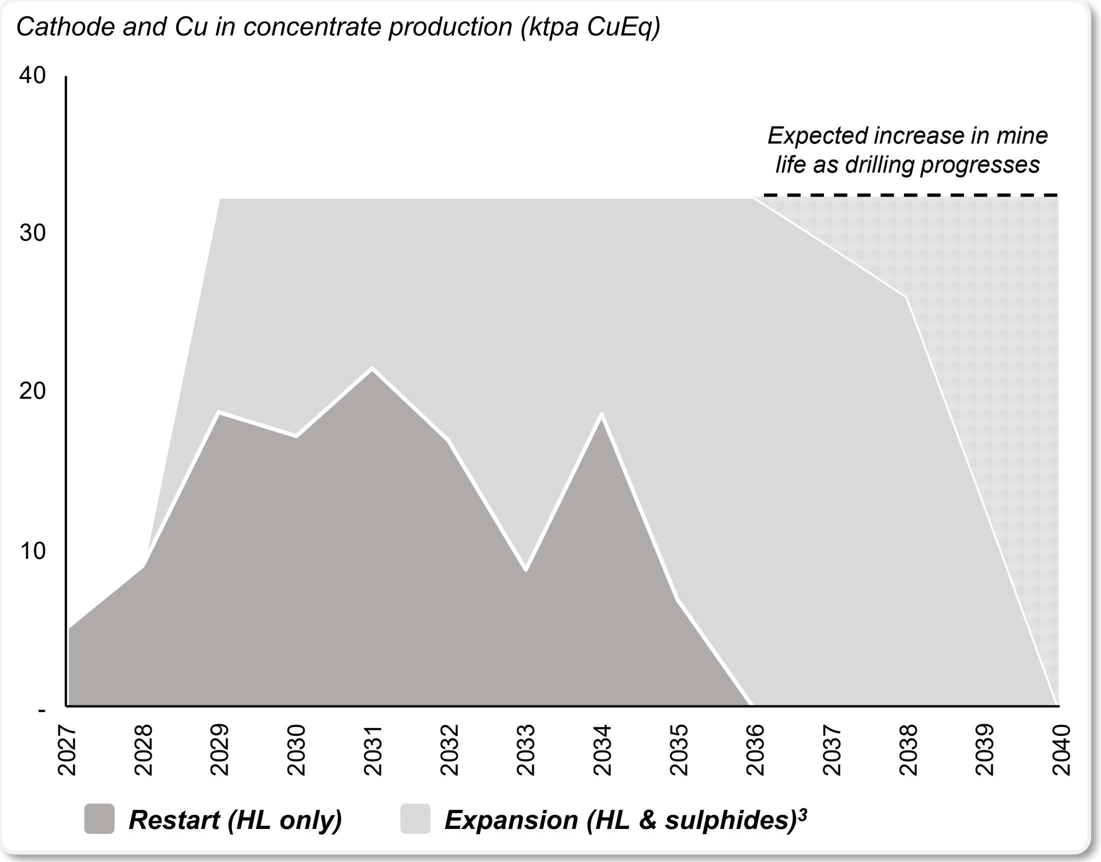
Tschudi expansion leverages existing infrastructure

Defined pathway to grow run-rate annual production to c.30ktpa CuEq[1]

Expansion plan utilises existing infrastructure…



…to increase run-rate production to c.30ktpa CuEq[1] payable metal

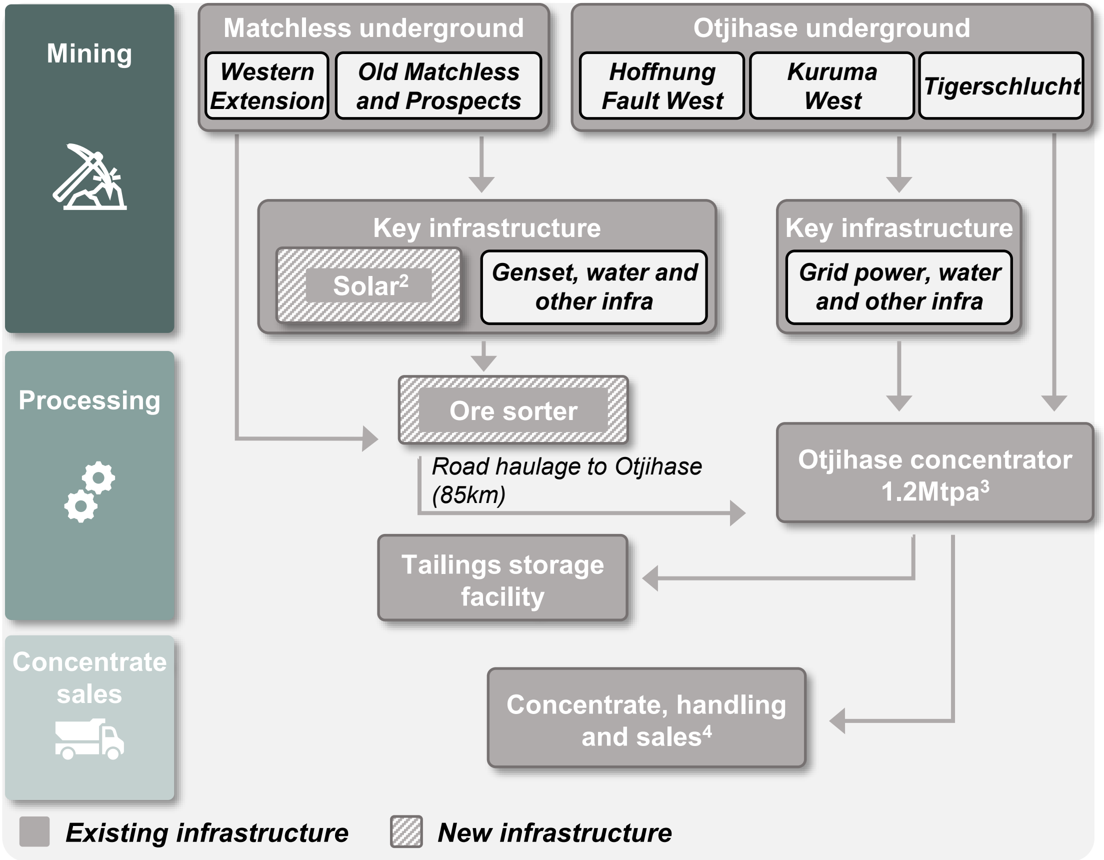


1. Cathode plus concentrate, incl. avg. 0.6Mozpa of CuEq silver by-product, with Ag and Au converted to ktpa CuEq at current spot prices of Ag ($68/oz), Au ($4,606/oz) and Cu ($14,450/t) as of 27-Aug-26
2. Unconstrained resources of 109.5Mt and constrained resources (within RPEEE shell) of 46.3Mt; unconstrained and constrained resources are inclusive of reserves
3. Expansion case includes production both from flotation plant and heap leach (at a reduced processing amount vs heap leach only case)

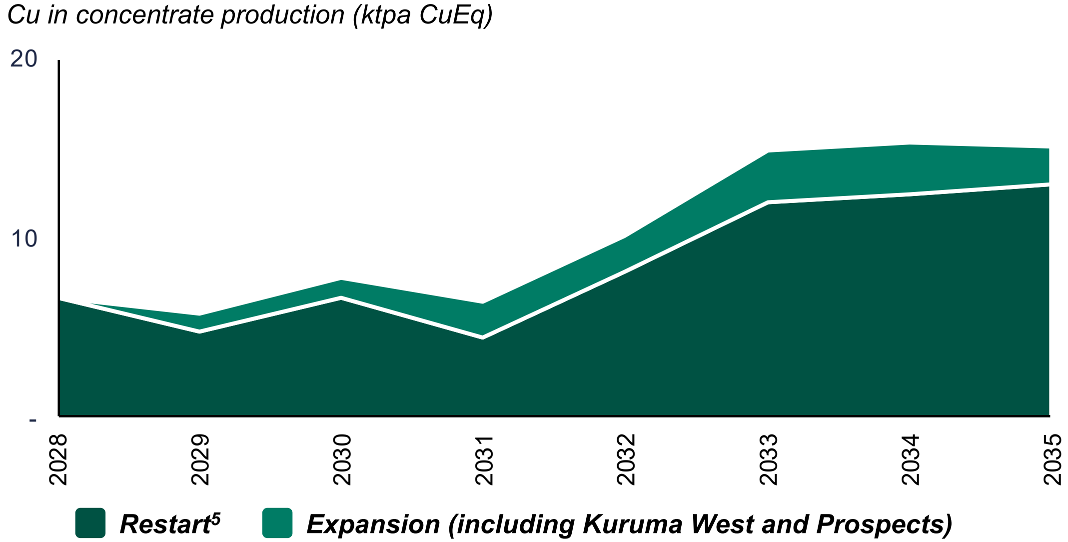
Central Operations restart and strategy

Near term restart of underground mining at Matchless Western Extension and Hoffnung Fault West with ore processed through the refurbished Otjihase concentrator

Infrastructure



Run-rate annual copper metal production c.10ktpa CuEq[1]

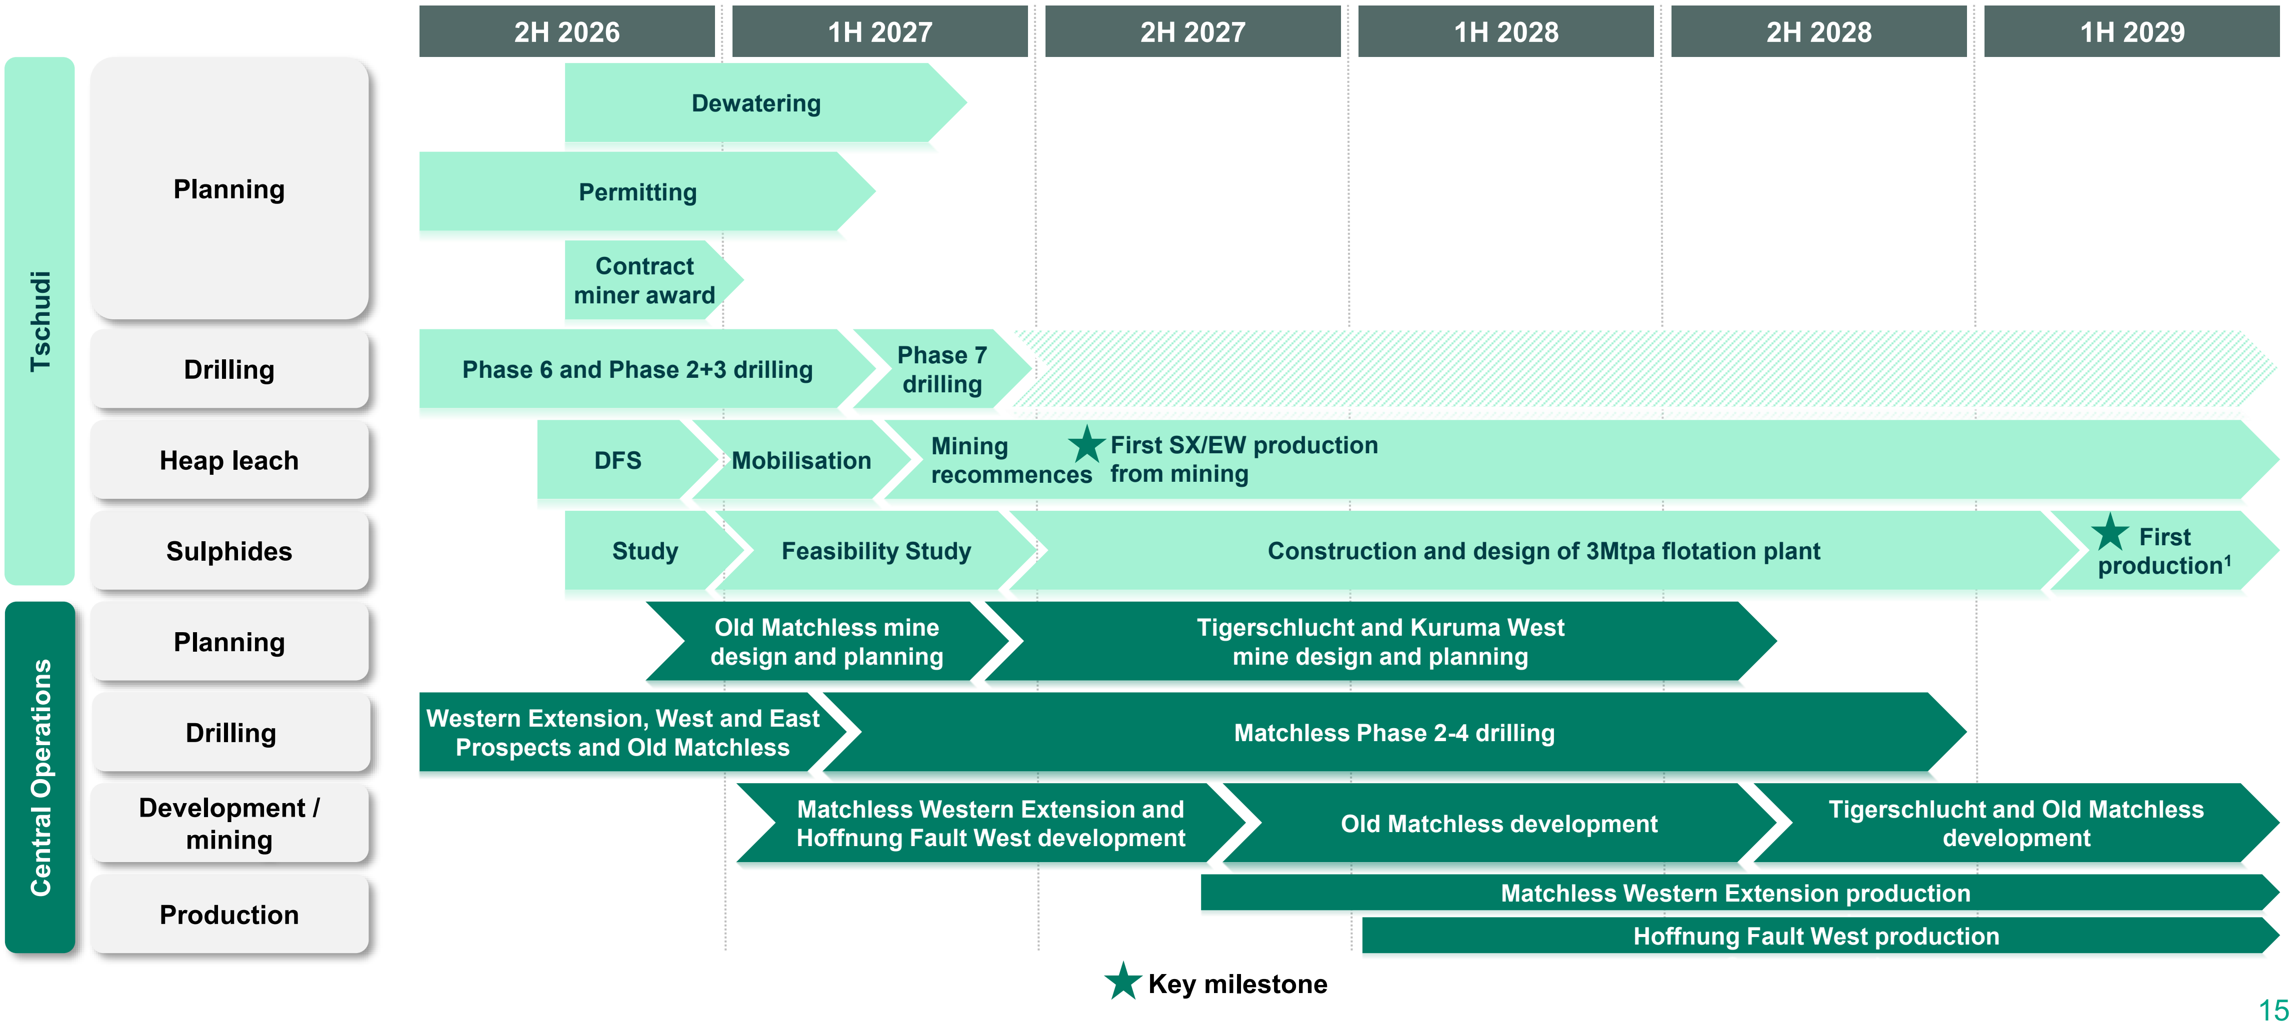


Sep-23 Matchless resources (1% Cu cut off)		
Category	Tonnage (Mt)	Grade (% Cu)
Indicated	1.05	2.13%
Inferred	0.65	1.71%
Total resources	**1.70**	**1.97%**

Mar-24 Otjihase resources (1% Cu cut off)		
Category	Tonnage (Mt)	Grade (% Cu)
Indicated	2.63	1.84%
Inferred	2.05	1.90%
Total resources	**4.68**	**1.87%**

1. Ag and Au converted to ktpa CuEq at current spot prices of Ag ($68/oz), Au ($4,606/oz) and Cu ($14,450/t) as of 27-Aug-26; run-rate calculated after 2029
2. Potential to convert from diesel to solar connection
3. Envisaged refurbishment up to 0.8Mtpa (with maximum capacity up to 1.2Mtpa)
4. Offtake is contracted to IXM under a 2010 offtake contract signed between Ongopolo Mining Limited and Louis Dreyfus Commodities
5. Restart of Western Extension, Old Matchless, Hoffnung Fault West and Tigerschlucht

Tschudi and Central Operations restart timeline



1. First production for flotation plant to start in mid 2029

ESG at the core of CCC’s strategy

Environment

Resource use and biodiversity
Responsible resource utilisation and biodiversity protection

Waste reduction and recycling
Mine site waste reduction and recycling projects

Renewable energy
Option for solar energy investment at Matchless to reduce diesel reliance

Water use licence status
Acquired the abstraction permit required to sustain dewatering. Established the water monitoring program to monitor impact of mining on ground water

Governance

Executive accountability
Executive bonuses linked to zero harm policy

Independent whistleblower hotline
Operated by an independent third party

Board-approved CSR Policy
Structured community-investment framework, effective in 2026

GRI alignment
Intend to adopt GRI mining-industry standards as the basis for future ESG disclosures

Safety & Health (Social)

Two lost-time injuries recorded in 2026
2 LTIs year-to-date at Central Operations (May and June); safety protocols reinforced across contractor workforce

1m+ man-hours
Worked since the last lost-time injury at Tschudi[1]

Operational safety improvements
Ongoing review of safer mining methods and underground comms systems to reduce risk / improve incident response

People (Social)

Local community hiring and workforce development
Prioritising local hiring and supporting the training and progression of Namibia’s mining workforce into senior roles

In-country reinvestment
Prioritising Namibian suppliers, with over 95% of expected spend directed to local businesses and communities

Gender diversity (WiMAN)
Supporting gender diversity through the Women in Mining Namibia partnership, including mentoring and coaching

Chief Santos FC partnership
Football club partnership reaching disadvantaged youth in schools

Key employees' stats[1]

Multiple senior employees have prior experience operating asset base at Tschudi and Central Operations

14%
female representation, with a three-year annually reviewed Affirmative Action Plan, to increase female representation at CCC

CONSOLIDATED COPPER

98%
of CCC employees are Namibians[2]

89% AA[3] rating
awarded for affirmative actions

Key partners

ALS (Laboratory services)	International SOS (Medical response)	Intertek (Laboratory services)	Knight Piésold Consulting (Tailings consultant)	
Kodo Drilling (Exploration drilling)	(Exploration drilling)	MineScope Services (Technical advisor)	Orelogy (Technical advisor)	Prodeo (Dewatering design engineers)

1. As of Mar-26
2. Data represents all employees on payroll in country which is made up of 98% Namibians
3. Awarded by Namibia's Employment Equity Commission. Affirmative actions aim to correct historical imbalances through targeted recruitment and equitable training. Represents standout performance towards workforce representation of designated groups, and company contribution towards employees' education, training and development

Summary

Multi-asset base metals portfolio in an attractive jurisdiction

Copper production recommenced at Tschudi in 2024, with open pit mining restarting in 2027

Low-risk Tschudi expansion plan deliverable through larger open pit mining operations and a new flotation plant

Central Operations is a high-grade, near-term brownfield restart opportunity
